We offer our disinfection service across a range of Industries including Hospitality, Retail, Healthcare, Office, Logistics and much more. Get in touch for a bespoke quote.

“We carry out all necessary risk assessments prior to executing the disinfection process to guarantee your safety...”

# How does the WGC disinfection process work? It's as easy as 1,2,3...

1

We remove biofilm from key pathways (high touch areas) using Ozonated Water

2

We deploy intelligent fogging systems to completely disinfect an area

3

We utilise a variety of sprayers to cover hard to reach areas, protecting you for longer

WGC use products that conform to regulations from around the world such as PAS 2424, EN13697, EN1276, EN1650 amongst many more antimicrobial efficacy tests.

Powered by

ZOONO®

# 1

We remove biofilm from key pathways (high touch areas) using Ozonated Water

**Rare, diamond core (Bluamec technology) generates 100x more  $O_3$  for maximum cleaning and sanitizing power.**

Ozonated water is a safe, effective cleaner and sanitizer that works stronger than bleach and hydrogen peroxide – without the hazardous odours or toxic chemical residues that come with traditional cleaning chemicals.

- ✓ So safe, ozonated water will not harm any surface or fabric
- ✓ Quickly, easily remove dirt, grime, stains, odours, mould, mildew, and pesticides
- ✓ **SDS Rating = 0-0-0**
- ✓ For a full list of technical specs, please see data sheet in appendix

We deploy intelligent fogging systems to completely disinfect an area

We utilise a variety of sprayers to cover hard to reach areas, protecting you for longer

### Option 1 – Virucidal disinfection

This is an extremely effective cleaner and sanitiser, certified to kill influenza type A viruses, swine flu, H1N1, MRSA, E-Coli and a wide range of bacteria. This product is for cleaning and sanitising frequently touched items such as tables, door handles, banisters, most surfaces and also for mopping floors.

Virucidal Cleaner is an everyday product aimed to aid in the fight against cross infection. This product is especially suitable for hotels, nursing homes, medical centres, schools, leisure centres, gym equipment and much more. It has a pleasant fragrance and is safe to use on most water washable surfaces.

- ✓ Cleans and sanitises all floors and surfaces
- ✓ Kills 99.999% of germs
- ✓ Prevents cross infection

Product	Application Method	Dry Time	Kill Rate	Other
Active Virucidal	Fogging, Electrostatic spray	15 mins	99.999%	-

We deploy intelligent fogging systems to completely disinfect an area

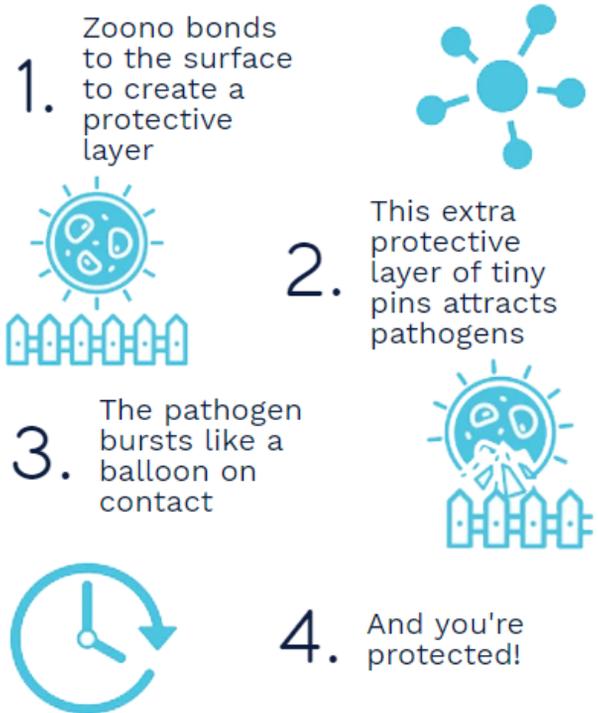

We utilise a variety of sprayers to cover hard to reach areas, protecting you for longer

### Option 2 – Superior Protection lasting up to 30 days

When we apply Zono to a surface, it leaves behind a mono-molecular layer that permanently bonds to the surface. These molecules are antimicrobial, silane based polymers that form a barrier of positively charged microscopic pins.

The positively charged microscopic pins attract and pierce negatively charged pathogens. The pins rupture the cell walls. This causes the pathogen to break up with lethal effect.

Certified effective against Covid-19

The layer of molecular antimicrobial pins carries on working for up to 30 days on surfaces. **Routine cleaning can continue and does not disrupt the Zono molecule or its antimicrobial activity.**

Product	Application Method	Dry Time	Kill Rate	Other
Zono antimicrobial shield	Fogging, Electrostatic spray	3 mins	99.999%	Bond lasts up to 30 days

Titan Protection)

Zoono's efficacy has been tested in the following laboratories:

## F A Q ' S

### **Are your products effective against COVID-19?**

Yes. Zoono Z71 has been lab tested and certified at 99.99% effective against COVID-19 amongst many other pathogens.

### **Can you share the Safety Data Sheets (SDS) relating to all solutions used?**

In short, Yes. For commercial clients, we acknowledge that you may need to keep the SDS sheets for record and can share with you beforehand.

### **How long does it take for the solution to dry?**

The application of ozone water dries immediately on key pathways as its being wiped.

For fogging and electrostatic dispensation of the solution, drying takes around 15 minutes

### **How long does it take to disinfect on average?**

It's difficult to give an average time as it's totally dependant on the volume of area that needs disinfecting and the number of key pathways (areas of persistent touching i.e. door handles, keyboards, glass on doors etc). Get In touch for a bespoke quote over the phone.

### **Is your solution safe? Will it damage any surfaces or fabric?**

The solution we use is colourless, odourless, environmentally safe, non-corrosive and whilst completely gentle for humans and animals, it's deadly for a wide range of bacteria and mould.

The solution does not contain harmful chemicals, as a liquid it's less toxic than everyday items such as vitamin C and coffee.

### **How would you disinfect public areas and minimise impact to guests?**

We would usually carry out any public area disinfection overnight ensuring we minimise impact to your operation.

### **Do you provide reactive Covid-19 emergency disinfection?**

Yes, we provide a reactive service in the event of a covid-19 outbreak. Get in touch to learn more.

### **How do we proceed?**
